Recall #: 21H7 | OIL STRAINER Recall Date: 2022 Mar 29

Recall Description

The oil strainer within the oil supply for the turbocharger might become blocked by oil/carbon deposits contained in the engine oil. A blocked oil strainer within the oil supply for the turbocharger leads to a lack of lubrication of the turbocharger bearings. This causes wear on the bearings and, as a result, the turbine wheel of the turbocharger may contact the housing, or the turbocharger shaft can break. This could lead to a lack of power or even stalling, which could increase the risk of a crash.

Remedy

The oil strainer within the oil supply for the turbochargers will be replaced and an oil change will be performed. A tester routine on the scan tool will check and document the correct performance of the boost pressure system.
